

**Intelcan completes strategic investment in Oracle  
Telecomputing Inc. (OTI)**  
***Added technology will enhance Intelcan's leading position in the  
international air traffic management sector***

Ottawa, ON, Canada – 11 May 2004. Intelcan, a leading global provider of air traffic management systems and airport infrastructure based in Ottawa, Canada, has completed a strategic investment in Oracle Telecomputing Inc (OTI). OTI is a supplier of software based products and services for air traffic control applications, located in Carleton Place, Ontario, Canada. As part of this agreement, the two companies will continue to operate as separate entities, but Intelcan will become a major shareholder in OTI and will integrate OTI technology into its Air Traffic Management (ATM) systems.

“We’re pleased to welcome OTI and its employees into the Intelcan group of companies,” remarked Mark Whittall, Chairman and CEO of Intelcan. “OTI products are world-class and so are the employees who develop and service the technology. The company’s track record speaks for itself – its products and services are deployed by leading air traffic service providers and military customers in Canada, the UK and many other countries around the world.”

The portfolio of OTI technology that has been integrated into the Intelcan product offering includes sophisticated automation tools and aeronautical information systems for air traffic controllers, air traffic flow management, internet flight service stations, training and simulation tools. OTI has over 20 years of experience in the air traffic control business.

“Intelcan’s investment will allow OTI to continue to develop and enhance its technology in response to the needs of our customers here in Canada and internationally,” said Jim Harvey, President of OTI. “This agreement strengthens the long-standing business relationship between our two companies.”
